

```
// CleanTables() by neilw, 2009
//
// Usage:
//     CleanTables(table : str?)
//         table = a single jQuery selector for tables you want to clean.
By default, all tables on the page are selected.
//         Note that only tables inside div#content are affected.
//         Examples: "table#FixThisTableOnly",
"table.FixAllTablesWithThisClass"
//
var tableSelect = $0 ?? $table ?? "table";
<html><tail>
<script type="text/javascript"> "
    DekiWiki.$(document).ready(function($) {
        var $tables = Deki.$('div#pageContent "..tableSelect..");
        $tables.find('td > p:first-child').css({'margin-top':'0px',
'padding-top':'0px'});
        $tables.find('td > p:last-child').css({'margin-bottom':'0px',
'padding-bottom':'0px'});
    });
" </script>
</tail></html>
```
