General information

- Consists of only one science project: **MB010**
- PI: BOCCARDI
- Targets: NGC315 etc.
- Session info: <http://www3.mpifr-bonn.mpg.de/div/vlbi/globalmm/>
- Station feedback: http://www3.mpifr-bonn.mpg.de/div/vlbi/globalmm/sessions/sep18/feedback_sep18.asc
- Text file with detailed antenna statistics: [c182a.antrep](http://www3.mpifr-bonn.mpg.de/div/vlbi/globalmm/sessions/sep18/c182a.antrep)

Current Status

correlation finished, data **released** on 13/03/2019.

Notes

All VLBA antennas are affected by the same problem (probably originating in the control software) during the whole session: for a significant portion of scans the recording starts several seconds or even few minutes late compared with the schedule. This results in effective reduction of observing time by a factor of 30-50%.

For some reason fourfit finds a fringe for every baseline including a KVN antenna. We are still looking how to avoid this problem. Meanwhile in the overview tables above the value of single-band delay is used to tell the difference between the considerably fewer real fringes and false positives.
