Apache Airflow is a generic pipeline framework. See http://airflow.apache.org/ for more information

Activation / Deactivation

Apache Airflow (2.0.1) is available on the cluster through a python virtualenv. In order to activate execute:

```
source /cluster/virtualenvs/python3-l1/bin/activate
```

when done deactivate by running:

```
 deactivate
```

Starting the webserver

```
airflow webserver -p 9000 -D
```

Log-In

Adminuser: rottmann

Starting the scheduler

```
airflow scheduler
```
