Notes

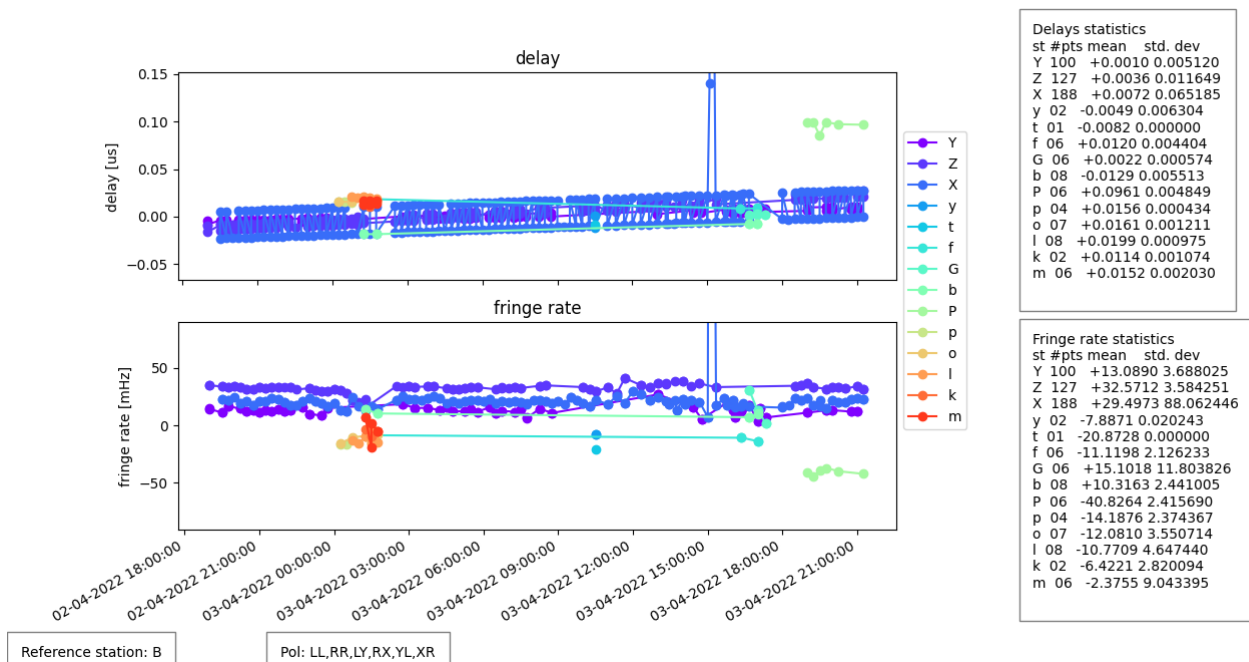

- NN scans 093-1915 to 093-2045 have no Mark6 data (only one 20-byte header) in either polarization, log says NN good starting from time 093-2030 which is before scan No0290
- GBT recorded 42 of 85 scheduled 86 GHz scans, no usable scans till 093-1900 ie No0277 inclusive per [AGMVA21A 233 03 log.txt](#), similarly it would appear for rest of track from 094-0000 system setup faulty as well per [AGMVA21B 162 01 log.txt](#) but [manual GBT log](#) says no issues in this part of the track
- GLT no fringes, with the same settings that yielded GLT fringes in C221A, nor within +-256 us nor 1 sec offsets of that. The observing log on EHT 2022 wiki notes no particular issues and shows good Tsys of 180K-300K throughout the track with elevations of 15deg-34deg. Other technical issue?
- GLT update: Tuning error at GLT found 03/2023, they were unknowingly 63 MHz off after C221A
