

```
/**
  USAGE:

  ListPages(pages, sort, reverse, limit, style, stripTitlePrefix)
    create a bulleted list of sorted pages with an optional limit

  PARAMETERS:

  (optional) pages : list/map/str
    list/map of pages to list; if pages is a str, then it is used as
    a path to a parent page to list all subpages;
    defaults to list of subpages of current page

  (optional) sort : str
    sort order for pages; one of 'custom', 'updated', 'created',
    'viewcount', or 'title'; defaults to 'title'

  (optional) reverse : bool
    reverse sort order; defaults to false

  (optional) limit : num
    maximum number of pages to show; defaults to no limit

  (optional) style : str
    list style to use; one of 'numbers' or 'bullets'; defaults to
    'numbers'

  (optional) stripTitlePrefix : str
    strip title prefix when present; defaults to none

  ***/
