

```
{{Template('MindTouch/Views/License')}}}
```

- **DekiScript**

[DekiScript](#) is the safe lightweight scripting language used for rapid application development inside MindTouch. Try this in the editor to get started:

```
01.  {{
02.  if (!user.anonymous)
03.    {"Welcome "..user.name;}
04.  }}
```

### Dynamic Templates

Get started now! Use these sample to start your first DekiScript app today.

1. [Hello World](#)
2. [Properties: User, Page and Site](#)
3. [Native Functions](#)

```
{{wiki.create{label:"create a template", title:"New template created by "..user.name,
path:"Template:", button:false}}}
```

- **API**

The [MindTouch API](#) exposes all the functionality of MindTouch through a REST-based API. Here are some sample endpoints:

1. `{{web.link(site.api.."/pages/"..page.id,"This page's XML")}}`
2. `{{web.link(site.api.."/users/"..user.id,"Your user's XML")}}`
3. `{{web.link(site.api.."/pages/popular","Popular Pages XML")}}`

Learn more with our [API documentation](#)

### MindTouch Extensions

Here's a preview of the extensions on your MindTouch:

1. [Google](#)
2. [RSS Feeds](#)
3. [Flickr](#)

You can [write your own extensions](#) in any language, including PHP and C#.

- **Technical Documentation**

```
01.  <h1>Template:FrontTalk</h1>
02.  <div class="frontback">
03.    <div class="front">
04.      <a href="{{page.fronturi}}
05.    </div>
06.    <div class="back">
07.      <a href="{{page.talkuri}}>
```

Using MindTouch to power your developer community? Try the **Syntax Highlighter** for code samples, tutorials and more.

1. Paste your code into a page
2. Use your mouse to select your code
3. In the toolbar, select **Format > Formatted**
4. In the toolbar, click **Transformations** and select your programming language

```
{{wiki.create{label:"create a new page", title:"New page created by "..user.name, button:false}}}
```
